

RIDER G

This rider provides 100% renewable energy purchased in the form of renewable energy credits on an opt-in basis to members receiving Standard Offer Service (SOS) from the Cooperative.

This rider is a dollar per kilowatt-hour rate and is applied to the member's billed kilowatt-hours. This rider will be updated using the most up-to-date market prices and the Maryland Renewable Portfolio Standards on or about January 1 of each year and whenever significant market pricing changes occur.

The rider will be charged to the kWh usage of the member excluding kWh usage covered under Maryland's Renewable Portfolio Standards requirements currently in effect.

An annual true-up adjustment will be included in the rate to pass through the cost or credit for any over recovery or under recovery in actual costs for the procured renewable energy.

The current applicable Rider G rate is \$0.01213 per kilowatt-hour.

The rider is available to members receiving SOS service on rate schedules R, GSND, GSD, LP, T, T-NSWC, SF, and CCSS.

A member choosing the rider program will begin participation at the start of the member's next scheduled billing period. If the next scheduled billing period begins fewer than five days from the day SMECO receives the request, participation may not begin until the start of the billing period following the next billing period. A member choosing to leave the rider program will end participation at the start of that member's next scheduled billing period. If the next scheduled billing period begins fewer than five days from the day SMECO receives the request, participation may not end until the end of the next billing period. A member participating in the rider program who chooses to begin receiving power supply service from an Electricity Supplier other than the Cooperative will end participation at the start of that member's power supply service from that Electricity Supplier.
