

Fall in love with your new energy-efficient home

If you're in the market for a new home, SMECO's ENERGY STAR® Certified Homes program will be the start of a beautiful relationship.

Love at First Sight

ENERGY STAR Certified Homes typically include energy-saving features that make them **20%–30% more** efficient than standard homes. Energy-efficient new construction that incorporates effective insulation, high-performance windows, tight construction and ducts, and efficient heating and cooling equipment not only helps you save money on reduced utility and maintenance costs, but also makes your home more comfortable and improves indoor air quality.

Learn how to build energy efficiency into your new home through SMECO's ENERGY STAR Certified Homes program. Visit **SMECO.coop/save** or call **877-818-4094** for details and to find a builder.

Fall in love with your home all over again

If you're still head over heels for your current home, SMECO's Home Performance with ENERGY STAR program takes a whole house approach to identifying attractive ways to improve your home's comfort, durability, and safety while you reduce energy use and save money.

Sweet Savings Make Love Last

Start with a home energy audit for **only \$100** (a \$400 value). A participating certified contractor will conduct a comprehensive assessment of your home to identify opportunities for improvements.

Every home is different, but your participating contractor might recommend:

- Sealing air leaks
- Adding insulation
- Sealing and balancing ductwork
- Replacing heating and cooling systems

Complete the recommended improvements and you could reduce energy use by **up to 20%**. You could be eligible for SMECO rebates **up to \$2,750!**

Find a participating contractor and learn more about rebates at **SMECO.coop/save** or **877-818-4094**.
