Stay safe around solar panels

A solar panel’s disconnect switch only disconnects the home from the panel. If the sun is shining, the panels still generate power and can cause a shock.

Be aware of the possible hazards

- **Shock** from contacting wiring
- **Toxic smoke** from burning solar panels
- **Roof collapse** from the weight of snow on solar panels
- **Trip and fall** from walking on solar panels

Follow these safety tips

- **Keep a safe distance** At least 10 feet
- **Don’t walk on solar panels**
- **Don’t cut any wiring**
- **Don’t touch broken panels**
